Job : BackEnd Developer

Company to work for : PT. Indonesia Bisa Ekspor

Responsibilities :

- Designing and developing server-side applications, APIs, and databases that power the website or application's frontend.
- Writing clean, efficient, and maintainable code that meets the project's requirements.
- Collaborating with frontend developers, designers, and other stakeholders to ensure that the website or application's functionality and user experience meet the project's goals.
- Optimizing the performance and scalability of the server-side application to ensure that it can handle large amounts of traffic and data.
- Implementing security measures to protect the website or application's data and prevent unauthorized access.
- Maintaining and debugging existing code and fixing any issues or bugs that arise.
- Documenting the code and providing technical support to other developers or stakeholders as needed.
- Staying up-to-date with the latest technologies, trends, and best practices in backend development.
- Participating in code reviews, agile development processes, and other team activities to ensure the quality and consistency of the codebase.

Overall, a backend developer is responsible for creating and maintaining the server-side components of a website or application, ensuring that it runs smoothly, is scalable, secure, and meets the project's goals and requirements.
